24cm Loop Yagi Kit (Rear Mount), Model DSE2424LYRMK

SPECIFICATIONS

Frequency range:	1.24 to 1.27 GHz	Gain:	18 dBi
Number of elements:	24	-3 dB Beamwidth	
Boom length:	72 inches	(E plane):	30°
Boom diameter:	1 inch	F/B ratio:	>20 dB
Mast diameter:	2 inches max	Maximum Power:	550 W average
Weight: (assembled)	3 pounds	Stacking distance:	19 1/4" (48.9cm) V. 21 3/4" (55.25cm) H.
Connector:	Type-N female		

PARTS LIST

Note: All hardware is Stainless Steel unless otherwise noted.

Quantity	Description	Quantity	Description
2	.058" x 1" drilled boom	24	4-40 x 1 1/4" screw
1	reflector 1 (1/4" wide)	24	4-40 lock nut
1	reflector 2 (3/8" wide)	2	8-32 x 1 3/8" screw
1	driven element	2	8-32 hex nut
4	director 1-4 (1/4" wide)	2	#8 Split Lock Washer
7	directors 5-11	1	Boom to Mast "L" Bracket
6	directors 12-17	1	2" U-bolt with nuts & lock washers
4	directors 18-21	1	Saddle
1	Anti-Seize Compound	1	Cable assembly w/connector
2	1" Black End Cap	1	Assembly Manual

Anti-Seize Compound - Apply a small amount of the supplied Anti-Seize Compound to the aluminum joints and to the threads of the U-Bolts to prevent galling.

BEFORE INSTALLING YOUR NEW ANTENNA, PLEASE BE SURE TO READ THE ENCLOSED WARNING PAMPHLET.

CAUTION: *While we strive to remove all burrs from all machined parts, there is always the possibility of sharp edges. We strongly suggest checking the edges and use a fine file, or 400 grit sandpaper, to remove any burrs that may have been left.*

**HORIZONTAL
POLARIZATION**

(Can be up or down)

**VERTICAL
POLARIZATION**

(Can be left or right)

ASSEMBLY INSTRUCTIONS

- 1) Attach loops to the boom with 4-40 screws and lock nuts in proper sequence. Loops go on the side of the boom marked with an "X". If the boom is spliced it will be between D11 and D12 and is held together by the mounting screws for these elements. Attach the contents of each bag of elements before opening the next bag. This will prevent any mix-up of elements on the boom. R2 (Reflector 2 -3/8" wide) is always the first element to be installed with R1 (Reflector 1 -1/4" wide) always next to the driven element. The connector bracket mounts in the hole with the circle – *No loops mount in this hole!* When tightening the nuts on the parasitic elements, be careful not to torque them too tightly. Snug down the nuts, align the elements and use a screwdriver for the final tightening. A 1/4-inch nut driver is almost mandatory for this job! Attach the driven element with the 5/16 nut provided. If only a single antenna is being built, it doesn't matter which way the loop is oriented. If antennas are to be stacked, see "Instructions for Stacking Loop Yagis".
- 2) Attach the boom to mast angle bracket (angle piece) behind the second reflector R2. The bracket can be installed for either horizontal or vertical polarization. Install U-bolt and saddle on the bracket.
- 3) Install the cable assembly through the hole in the driven element mounting bolt. Make sure the connector bracket is correctly oriented, the bend should be forward for center mount antennas and rear facing for rear mount antennas. Solder the outer shield to the driven loop first making sure there is no shield sticking above the large hole in the driven loop. After the shield is soldered, pass the center conductor through the small hole in the driven loop and bend the center conductor over and solder (See Assembly Tips below).

We have created a You Tube video, the link of which can be found on our website, documenting the following steps:

<https://youtu.be/ojXbsDv5cvU>

At this point the connector assembly is facing down, connect a piece of coax and your SWR bridge or VNA. Pull down on the connector (which will flatten the loop) until you reach the lowest SWR. If it's less than 1.5:1 you can stop and make sure the loop doesn't try to pop back up, sometimes you have to squeeze the loop with your fingers to make sure it stays in the shape that gave the best SWR. If you want to further lower the SWR, from the rear of the

antenna, place both your thumbs on the driven loop on either side and gently push it forward towards D1, you only need to tilt it maybe $\frac{3}{16}$ " to $\frac{1}{4}$ " and that should drop the SWR to 1.1:1 or less.

Now, GENTLY bend the UT-141 coax after it exits the boom towards the front or rear, depending on the mounting. You do not want to bend it so tightly that it crushes where it extends through the bolt. The connector bracket should line up with either D1 or D2 (or the hole with the circle around it on rear mount antennas), remove that nut and place the connector bracket on the screw and re-attach the nut. If the bracket doesn't line up, sometimes you have to flip the bracket. Loosen the $\frac{3}{4}$ " nut by holding the connector body with a $\frac{9}{16}$ " open end wrench. Remove the connector bracket and flip it.

Connector doesn't fit

Front Mount Connector

Rear Mount Connector

- 4) Attach the feedline and tape it to the mast. Seal all connections with silicone RTV or equivalent.
- 5) Attach the two black end caps and this will complete the assembly of your DSE2424LYRMK.
- 6) The SWR should be 1.5:1 or better. Additional tweaking can be accomplished by adjusting the distance between the driven element and R1, or by adjusting the shape of the driven element.

DO NOT, UNDER ANY CIRCUMSTANCES, APPLY ANY TYPE OF SEALANT OR COATING TO THE DRIVEN ELEMENT, T-ARMS OR CONNECTOR ASSEMBLY, OTHER THAN KRYLON® CLEAR COAT. ANY OTHER COATING WILL ADVERSELY AFFECT THE SWR AND VOID YOUR WARRANTY.

ASSEMBLY TIPS:

The boom diameter is 1 inch, and it is drilled for 4-40 hardware (no. 33 drill bit). The driven element hole is enlarged to $\frac{5}{16}$ inch. All elements are 0.032 inch thick. R1 and D1-D4 are 0.250-inch-wide; the rest are 0.375 inch wide. Note that the element spacing from D7 on is 3.56 inches. The feed coaxial cable (0.141-inch semi rigid) goes through the mounting bolt

and is soldered to the open ends of the element. For best match, the driven element should be approximately 2.75 inches high; this makes it wider than it is tall. This shape can be adjusted for best match. This antenna has been optimized for the short boom length from the original G3JVL design.

Soldered Driven Element

DIMENSIONS OF 1269 MHz LOOP YAGI, MODEL 2424LYRMK

<i>Element</i>	<i>Spacing from end of boom</i>	<i>Circumference</i>	<i>Element</i>	<i>Spacing from end of boom</i>	<i>Circumference</i>
R2	0.00	10.002	D10	27.94	8.534
R1	3.17	10.060	D11	31.58	8.534
DE	4.14	9.586	D12	35.21	8.274
D1	5.28	8.584	D13	38.85	8.274

D9	24.31	8.534	D21	67.94	8.008

Note: All dimensions are in inches

Directive Systems Warranty Policy

All Directive Systems antennas are built with the finest materials available. We take great pride in building a quality product that will give years of good service and performance. If there is a defect in materials or workmanship within 90 days of purchase, Directive Systems will repair or replace the defective part, free of charge, to the original purchaser. **DO NOT RETURN ANYTHING WITHOUT PRIOR AUTHORIZATION FROM DIRECTIVE SYSTEMS.** Please contact us either by phone or email describing the problem and we will work to resolve it.

If, after examining a new antenna you received, you are not satisfied, contact us immediately for return authorization and refund. **ANY ANTENNA THAT HAS BEEN MODIFIED WILL BE SUBJECT TO A RESTOCKING CHARGE. IF AN ANTENNA IS SO MODIFIED AS TO MAKE IT UNUSABLE, DIRECTIVE SYSTEMS RESERVES THE RIGHT TO REFUSE TO ACCEPT THE ANTENNA FOR RETURN.**
